## OUR STORY

Gold is the oldest metal in the world. It is said that gold was first discovered as far back as 5,000 BC.

At that time, of course, there was no technology to extract gold from gold ore, and it is believed to have been discovered in the form of natural gold.

How did the ancients react to gold when they saw it for the first time?

How did it feel when it suddenly caught their eyes, when they held it in their hands, and did they think of it as just another stone mixed in with other stones?

There may have been a time when no one gave it a second thought when they found gold.

But when someone noticed it as something special, it quickly spread around the world.

In some places as the highest symbol of faith, and in others as an ornament of the highest order.

To return to our world, in 2021, a discovery took the world by surprise.

It was the NFT.

But in fact, the NFT was born five years earlier, in 2016. It was news that was of no interest to many people, because they had no idea what NFT was or what it could be used for.

Today, the NFT market is growing at an unprecedented rate, transforming itself into a 4 trillion yen industry.

When we first came in contact with it, we had no idea what it could be used for. I suspect

that when we come to grips with this fact, we are having the exact same reaction as those who discovered gold in 5000 B.C.

Five years of not realizing the value of gold and passing it off as a roadside stone, and in 2021 realizing its brilliance. 6 years of not realizing the value of gold, 2 years of realizing it's brilliance, and now, like all industries, are striving to process this golden resource....

Today's NFT technology is just like freshly mined gold.

Overview.

Born at the end of 2017 with the birth of CryptoKitties, NFTs formed a 4 trillion yen market in

less than a year, with global expansion in 2021.

In 2022, the NFT market is steadily taking root even amidst rapidly growing socioeconomic uncertainty.

Movements over the past year have started with collections as collectible NFTs, and furthermore, have been actively traded in the secondary market.

NFT technology is not limited to the art industry, but also has use and growing potential in music, videos, games, VR items, and more. NFT technology is, breaking down the borders of its original creation and becoming more and more closely connected to our daily lives.

However, as NFT becomes more mainstream, it has often been seen that even items that have no

value or cannot be called works of art become NFT, and are sold and distributed as if they have increased in value.

In addition, the use of meaningless NFT technology has increased, and no one is able to evaluate the correct value of the work, leaving both the creator and the buyer in confusion.

These problems are caused by the fact that the term "NFT" has become a word that has taken on a life of its own, and the objective of everyone has become to convert it to an NFT, and

the original reason why NFT technology is used has been lost.

What we emphasize is not converting everything to NFT. We encourage the conversion of valuable things to NFT, and we want to enhance the value of the NFT without damaging it.

We are not suggesting that 100 years from now, with unfalsifiable technology, the NFT will

exist as the one and only, exactly as they were before, and that the NFTs will exist exactly as

they are now. We believe that the real NFT is the practical

application of the highly transparent technology. As of 2022, the most important issue is the use

of NFT as a proof of assets.

The world is changing at a tremendous pace.

This is especially true in the world of financial markets and blockchain. The wave of

change

is short-lived. We are convinced that the next generation of assets will not be real estate or stocks, but NFTs. NFTs are the next generation of assets, and we believe that they will increase in value

without damaging the asset. This is our NFT, a new technology that is still in its infancy. This is our project, and it is a completely new form of asset ownership that will be realized

using NFT technology.

In addition, as the metaverse space becomes more mainstream in the economy, we would like

to build a future in which NFTs are used as a part of that mainstream. We hope to build a future in which NFTs are a mainstream part of the economy.

## The Project

We are embarking on the NFT conversion of some of the rarest metals.

First of all, GOLD, the oldest asset on earth, is treated as a stable asset, unaffected by economic trends.

Especially in the recent turbulent social climate GOLD is known as "contingency gold" and

its price has been rising rapidly, especially amid the recent upheaval in society.

GOLD is an absolute physical asset, and we feel that it is significant to combine GOLD with

the newest NFT technology.

GOLD, the absolute physical asset, and the newest NFT technology.

In fact, NFT itself has no value. This is because NFT is a technology.

The value itself comes from the reality stored in the NFT.

Whether it is art, real estate, or some kind of property right income, it varies.

Our first effort was to store GOLD in the NFT.

## The Core

Why convert GOLD to NFT?

What is the difference between GOLD and NFT?

The system has already been perfected in the "NFT" and there is no need to convert assets

to electronic form now.

However, NFT is fundamentally different from digitization.

NFT conversion exists on a blockchain that cannot be tampered with, and furthermore, by writing smart contracts, contracts can be automatically fulfilled.

For example, suppose you purchase 10 million yen worth of GOLD.

One year later, the price of GOLD rises by 20%. You could sell the GOLD for 12,000,000 yen, which is a profit of 2,000,000 yen.

This is a profit of 2 million yen.

However, if the price had fallen by 10%, it would have been 9 million yen, resulting in a loss

of 1 million yen. In other words, the profit of GOLD depends on the price fluctuation and

whether the price has gone up or down from the price at the time of purchase. The profit of GOLD depends on the price fluctuation. By storing GOLD, with its simple structure, in an NFT, you can generate a completely different kind of profit. In addition, the base GOLD is a little bit like real estate.

When you buy a building, the value of the building changes with the change in the price of the land, but apart from that, there is the rental income that can be earned by renting out vacant units to third parties. The NFT of our asset is a way to make a profit from the asset, which until now could only be made by the price fluctuation of the asset. The NFTs of our assets will allow us to generate rental income similar to the case of real estate, whereas before we could only make profit from the fluctuation of the price of the asset.

This is revolutionary and will change the way we own assets in the future.

#### NFT Earn (Staking System)

An NFT in which assets are stored is called an Asseted NFT. Users can earn new tokens (ICE METAL COIN) by staking this NFT with assets.

In addition, users who are staking NFTs will receive points for pre-selling or purchasing rare NFTs. and points will be awarded for purchases.

#### NFT Earn2 (Token Ecosystem)

We will build a sustainable token ecosystem for early users and early adopters to contribute and participate in the ICE CUBE ecosystem.

The project will also create an LP statement to provide benefits to users who intend to hold the ICE METAL COIN in the medium to long term.

#### NFT Earn3 (Rights income)

Asset-backed NFTs purchased by project participants will receive a 5% royalty for each secondary distribution on the secondary market.

A 5% royalty is paid to the project participant for each NFT with assets purchased by the project participant for secondary distribution on the secondary market.

#### Stake Summary

- Stake an asset-backed NFT and receive ICE METAL COIN.
- Receive USDT by offering ICE METAL COIN and the target currency pair as liquidity and staking the received LP tokens. Stake the received LP token and receive USDT.
- Giveaway to users who have completed the above staking.

We care about rewarding all participants in the ICE CUBE project and encouraging community participation.

Users will not have to buy or sell the NFTs with the assets they have purchased. Users

can  
earn additional income through staking and secondary commissions without having to  
buy  
and sell the NFTs with the assets they have purchased.  
ICE METAL COIN earned through staking can also be used to earn USDT through LP  
staking with tokens. The ICE METAL COIN earned from staking can be used to earn  
USDT  
through further LP staking with tokens.  
We believe that these mechanisms will add value to the overall ICE CUBE project.

#### Further Possibilities for NFT

##### Challenge 1

We are working to propose an asset-based NFT that enhances and preserves the value of  
NFT works created by artists.  
With the creativity and rarity created by ART, and the preservation of value through  
assets,  
there is no reason why the value of such NFT works should not increase.

##### Challenge 2

Create a mine in the Metaverse, purchase NFT items (shovels, etc.) with ICE METAL  
COIN,  
and use the shovels to dig out gold, platinum (NFT with assets), etc. from the mine to  
create  
a Play to Earn space.

#### Information to be written in the NFT

NFT Issuing Company  
Smart Lab Inc: D1005,383 Kalaimoku Street,Honolulu,HI96815  
Asset (Precious Metal) Ownership Company  
Scott Westpac LLC  
7

#### Quality Warranty

Au RIC Metallurgical Laboratories LLC issued inspection certificate at NFT.

#### Storage Warranty

Stored at Brinks Inc.

#### Cash for Assets

An NFT with assets can be exchanged for physical assets with the assets ultimately stored  
in the NFT.

### Community Governance Voting

ICE METAL COIN, a governance token, is designed as an incentive for ecosystem participants to contribute to the development of the ecosystem.

ICE METAL COIN holders can cast a governance vote on any choice, including setting the

terms and conditions for the project, setting incentives for holders, and providing input into

the new roadmap.

Community growth is the most important factor in increasing the value of the ICE METAL COIN.

This vote is very important to us because we believe that community growth is the most important way to enhance the value of the ICE METAL COIN. is very important to us.

### About ICE METAL COIN

The total supply of ICE METAL COIN is 5,000,000,000. Tokens

The economics are as follows

#### Private Sale

ICE METAL COIN is not sold at any Private Sale.

8

#### Staking Reward

54% of the total supply is reserved for NFT users' staking rewards.

Staking Reward is reserved with sufficient Reward to ensure that project participants can benefit from the project.

#### Initial Liquidity

Uniswap will provide 30% of the total number of Staking Rewards outstanding at the time of

listing as Initial Liquidity. (Included in Staking Reward)

#### Treasury

- 15% of the total supply will be used as a treasury to pay for the expansion of the ecosystem and as an incentive for community contributors.

#### Marketing / Development

13% of total supply is reserved for project marketing and development.

#### Founder Team

12% of the total supply is reserved for the Founder of the ICE CUBE team. These COINs have a vesting period and will be released slowly after vesting.

#### Advisor

6% of the total supply is reserved for Kabuki Team Advisor fees.

These tokens have a vesting period. After the vesting period, these tokens will be released gradually.

## Smart Lab Platform Products

### CHAINART Wallet Implementation

The CHAINART Wallet is a one-stop shop for purchasing ICEMETALCOIN, and a staking

system has been implemented to allow users to easily access the marketplace.

### NFT Marketplace "CHAIN ART"

The CHAIN ART marketplace is managed off-chain, allowing users to buy and sell without

paying high commissions.

## Asset-based NFT

The CHAIN ART marketplace can be used as a secondary marketplace for "ICE CUBE".

### Roadmap

2021/8

Establishment of U.S. subsidiary, SMART LAB Inc.

2022/3

Signed a partnership agreement with Scott Westpac LLC

2022/6

Launch of NFT (ICE CUBE) commercialization project with assets

2022/7

Whitepaper is released to the public.

Start staking NFT with assets (ICE CUBE)

2022/8

Listed on UniSwap, a decentralized exchange

2022/10

Single staking of ICEMETALCOIN is implemented in CHAINART wallet

2023/1

Implement LP staking of ICE METAL COIN.

2023/3

Redemption of NFTs with assets starts

## TEAM

Our team consists of an innovative management team with a great deal of experience, an asset-owning mineral company, an art foundation, more than a dozen artists who have agreed to become NFTs, and a talented development team.

These teams will generate revenue from the NFT and facilitate the growth of the economic

zone in which we continue to hold it.

## Disclaimer
